

Human Evaluation of Generated Worlds

English questionnaire · self-contained artifact review

Purpose. This questionnaire evaluates the quality of five worlds generated from five one-sentence premises. Everything needed for evaluation is printed in this document. Do not open or run Agora. Judge the generated world shown here, not agent behavior, runtime reliability, or the generation model.

Respondent code: _____

Assigned start code (A–E): _____

How to review

Start with the world matching your assigned code, continue alphabetically, and wrap after E. Read the premise first, then inspect the equally sized evidence set: one map, one representative character sheet, rules, places, people, objects, and possible player actions. Complete that world’s response page before continuing. Apply the same standard to every world and do not rank worlds against one another.

Rating scale

- 1 Strongly disagree: the evidence contradicts the statement or provides almost no support.
- 2 Disagree: important elements are generic, missing, or poorly connected.
- 3 Mixed: the world is serviceable, but support is uneven or only partly developed.
- 4 Agree: the evidence is specific, coherent, and supports the statement well.
- 5 Strongly agree: the world is unusually specific, mutually reinforcing, and compelling.

What the seven items mean

The first six items assess premise realization, systemic coherence, society and character, spatial and material specificity, meaningful interaction possibilities, and visual coherence. Their equal-weight mean is the primary World Quality score. The seventh item is a separate overall judgment. “Interaction possibilities” means what this documented world appears to let a player attempt; it does not ask whether those actions succeeded in a runtime.

No model names, system traces, runtime captures, or performance scores are shown. Each world receives the same evidence fields and the same questions.

World A Clockwork Rain Conservatory

One-sentence premise In a city-sized glass conservatory powered by mechanical rain, aristocratic houses and botanical guilds compete for control over patented seeds, weather control, and social status through trade, sabotage, and intricate legal battles.

Generated world map

Representative character sheet

Rules and institutions

- Reputation functions as currency; unsupported public accusations can ruin the accuser.
- Inter-guild disputes go through the Adjudicator's Court rather than direct confrontation.
- Knowledge of the Grand Mechanism is protected; unauthorized access is treason.

Activity loops

Industrial sabotage; reputation games; patent litigation; seed and weather-device trade.

Places

Grand Atrium Exchange; Valerius Prime Botanicals Showroom; Aqua-Regula Weather Systems Kiosk; Conservatory Central Seed Bank.

People and motives

- Lysandra Valerius, disgraced heiress and botanical smuggler, seeks her family's Ever-Bloom patent.
- Silas Vane, patent enforcer, hunts the missing seed patent and its smuggler.
- Elara Thorne, weather-musician and debt collector, wants her Rain-Song patent restored.
- Bramwell Loricatus, notary and rain-debt arbitrator, plans to seize the Valerius showroom.

Objects and possible actions

Chrono-bloom seed; forged pollen permit; bottled monsoon cog; time-lattice vine cutting; rain-debt ledger. A player could sabotage a mechanism, uncover a secret, or file a formal grievance.

World A Response sheet

Statement	1	2	3	4	5	Optional note
A1. Premise realization. The generated content develops the sentence into a distinctive world rather than merely restating it.	☐	☐	☐	☐	☐	
A2. Systemic coherence. Rules, institutions, resources, conflicts, and activity loops fit together causally.	☐	☐	☐	☐	☐	
A3. Society and character. The roles, motives, and tensions imply a believable community with more than interchangeable characters.	☐	☐	☐	☐	☐	
A4. Spatial/material specificity. Places and objects are concrete, recognizable, and tied to how the world works.	☐	☐	☐	☐	☐	
A5. Interaction possibilities. The world suggests multiple meaningful things a player could try beyond ordinary conversation.	☐	☐	☐	☐	☐	
A6. Visual coherence. The map and character asset are readable and belong to the same world described in the text.	☐	☐	☐	☐	☐	
A7. Overall judgment. Taken as a whole, this is a high-quality generated world that I would want to explore.	☐	☐	☐	☐	☐	

First action

What is the first consequential action you would try in this world?

Most distinctive element

Which generated detail most strongly gives this world its own identity?

One improvement

Which single generated element most needs improvement?

World B Aurora Court of Migrating Cities

One-sentence premise A convoy of nomadic, biomechanical cities traverses a frozen wasteland, their survival dependent on tense diplomacy, resource trading, and managing the complex logistics of their migration.

Generated world map

Representative character sheet

Rules and institutions

- Hospitality is a binding contract; breach triggers sanctions by the convoy.
- A city's standing depends on the strength and wealth of its trade pacts.
- The Aurora Court mediates formal disputes; unsanctioned conflict is piracy.

Activity loops

Sanction cycles; resource scrambles; migration planning; pact formation.

Places

Geothermal Conduit Hub; Lichen Vat Hydroponics; Cartographers' Spire; Scrap-Metal Exchange.

People and motives

- Kaelen Voss, exchange arbitrator, needs rare-earth magnets for a levitation rail.
- Elara Thorne, high cartographer, maps the Silent Zone and seeks a lost black box.
- Thistle Vane, lichen-vat master, wants to prove biofuel can sustain the convoy.
- Orlaith "Oil-Slick" Jax, chief siphonist, hides a fractured core while seeking a stabilizer.

Objects and possible actions

Cryo-cilia actuator; gyro-stabilizer; sun-kelp ration; geothermic core shard; sub-glacial chart. A player could propose a sanction, forge a migration pact, or sponsor an expedition.

World B Response sheet

Statement	1	2	3	4	5	Optional note
B1. Premise realization. The generated content develops the sentence into a distinctive world rather than merely restating it.	☐	☐	☐	☐	☐	
B2. Systemic coherence. Rules, institutions, resources, conflicts, and activity loops fit together causally.	☐	☐	☐	☐	☐	
B3. Society and character. The roles, motives, and tensions imply a believable community with more than interchangeable characters.	☐	☐	☐	☐	☐	
B4. Spatial/material specificity. Places and objects are concrete, recognizable, and tied to how the world works.	☐	☐	☐	☐	☐	
B5. Interaction possibilities. The world suggests multiple meaningful things a player could try beyond ordinary conversation.	☐	☐	☐	☐	☐	
B6. Visual coherence. The map and character asset are readable and belong to the same world described in the text.	☐	☐	☐	☐	☐	
B7. Overall judgment. Taken as a whole, this is a high-quality generated world that I would want to explore.	☐	☐	☐	☐	☐	

First action

What is the first consequential action you would try in this world?

Most distinctive element

Which generated detail most strongly gives this world its own identity?

One improvement

Which single generated element most needs improvement?

World C Mycelium Patent Bazaar

One-sentence premise In a vast undercity built from engineered mycelium, rival guilds and families trade in living technology, from fungal bridges to encrypted spore data. The market thrives on innovation, intellectual property, and corporate espionage.

Generated world map

Representative character sheet

Rules and institutions

- Disputes use arbitration and sabotage; physical violence brings expulsion and asset seizure.
- Reputation is currency, contracts are binding, and defaults become public.
- Traders use identity masks; a true name creates legal and financial liability.

Activity loops

Patent races; espionage and acquisition; biological grafting; injunctions.

Places

Spore-Lock Depository; Graft-Wright's Stall; Patent Scribe's Office; Myco-Nostro Negotiation Lounge.

People and motives

- Vespera Thorne, senior patent arbitrator, seeks the Ever-Bloom sequence.
- Kaelen Voss, rogue bloom-broker, wants to register a forbidden neural-link patent.
- Elara Vane, master graft-wright, aims to make the patent office obsolete.
- Jaxen Krell, chitin logistics foreman, plans to intercept a primordial spore patent.

Objects and possible actions

MycoCrypt spore key; lockpick fungus; Sun-Eater algae patent; mycelial patch; glimmer-cap vial. A player could verify a patent, initiate sabotage, or file an injunction.

World C Response sheet

Statement	1	2	3	4	5	Optional note
C1. Premise realization. The generated content develops the sentence into a distinctive world rather than merely restating it.	☐	☐	☐	☐	☐	
C2. Systemic coherence. Rules, institutions, resources, conflicts, and activity loops fit together causally.	☐	☐	☐	☐	☐	
C3. Society and character. The roles, motives, and tensions imply a believable community with more than interchangeable characters.	☐	☐	☐	☐	☐	
C4. Spatial/material specificity. Places and objects are concrete, recognizable, and tied to how the world works.	☐	☐	☐	☐	☐	
C5. Interaction possibilities. The world suggests multiple meaningful things a player could try beyond ordinary conversation.	☐	☐	☐	☐	☐	
C6. Visual coherence. The map and character asset are readable and belong to the same world described in the text.	☐	☐	☐	☐	☐	
C7. Overall judgment. Taken as a whole, this is a high-quality generated world that I would want to explore.	☐	☐	☐	☐	☐	

First action

What is the first consequential action you would try in this world?

Most distinctive element

Which generated detail most strongly gives this world its own identity?

One improvement

Which single generated element most needs improvement?

World D Sunken Satellite Monastery

One-sentence premise A monastic order salvages a crashed deep-space satellite, creating a unique underwater society where information, bandwidth, and salvaged tech are the primary currency.

Generated world map

Representative character sheet

Rules and institutions

- Salvage claims must be registered with the Archivist before exchange.
- Interrupting communion with the satellite data core is a grave offense.
- Contracts encoded on data wafers bind access to information and machinery.

Activity loops

Salvage cycles; information trade; signal interpretation; pressure-bound expeditions.

Places

Data-Sanctum; Bandwidth Exchange; Scrap-Scribe's Workshop; Silent Canteen.

People and motives

- Arch-Scribe Vaelen, void-frequency cantor, wants to decrypt the First Signal.
- Kaelith-9, pressure scavenger and relic tuner, searches for the Origin-Key.
- Sister Thalassa-Rho cultivates a biological filter against the signal.
- Exarch Zephyrin-Mu, signal smuggler and bandwidth broker, plans to sell the intercepted frequency.

Objects and possible actions

Gyroscopic prayer wheel; captured-starlight shard; encrypted Pater Noster; sonar canticle emitter; abyssal eye pearl. A player could decrypt a fragment, interface with the core, or negotiate a salvage contract.

World D Response sheet

Statement	1	2	3	4	5	Optional note
D1. Premise realization. The generated content develops the sentence into a distinctive world rather than merely restating it.	☐	☐	☐	☐	☐	
D2. Systemic coherence. Rules, institutions, resources, conflicts, and activity loops fit together causally.	☐	☐	☐	☐	☐	
D3. Society and character. The roles, motives, and tensions imply a believable community with more than interchangeable characters.	☐	☐	☐	☐	☐	
D4. Spatial/material specificity. Places and objects are concrete, recognizable, and tied to how the world works.	☐	☐	☐	☐	☐	
D5. Interaction possibilities. The world suggests multiple meaningful things a player could try beyond ordinary conversation.	☐	☐	☐	☐	☐	
D6. Visual coherence. The map and character asset are readable and belong to the same world described in the text.	☐	☐	☐	☐	☐	
D7. Overall judgment. Taken as a whole, this is a high-quality generated world that I would want to explore.	☐	☐	☐	☐	☐	

First action

What is the first consequential action you would try in this world?

Most distinctive element

Which generated detail most strongly gives this world its own identity?

One improvement

Which single generated element most needs improvement?

World E Tidal Embassy of Lost Languages

One-sentence premise A floating embassy is the sole hub for trading endangered languages, which are treated as political assets. Linguists, spies, and diplomats vie for control over translation rights and cultural memory.

Generated world map

Representative character sheet

Rules and institutions

- Public emotion is a grave diplomatic breach inside the embassy.
- Linguistic knowledge functions as currency, leverage, and political power.
- Misusing a language is treated as a consequential political act.

Activity loops

Whispered treason; ghosts in the protocol; translation auctions; provenance disputes.

Places

Phoneme Exchange; Scriptorium of Whispers; Silent Auction Room; Cartographer's Nook.

People and motives

- Elara Vane, phonetic smuggler and lexical restorationist, seeks the Siren's Syntax.
- Valerius Thorne, lexical broker, wants a monopoly on the First Tongue.
- Inspector Kaelen Voss investigates distribution of the Silence Plague.
- Lyraen "Ink-Lung" Sunder forges memory maps to recover a family dialect.

Objects and possible actions

Whispering conch; choral symbiote; Seal of the Silent Court; ghost-transcript slate; Ink of Echoes. A player could decode an echo, introduce a memetic phrase, or forge linguistic provenance.

World E Response sheet

Statement	1	2	3	4	5	Optional note
E1. Premise realization. The generated content develops the sentence into a distinctive world rather than merely restating it.	☐	☐	☐	☐	☐	
E2. Systemic coherence. Rules, institutions, resources, conflicts, and activity loops fit together causally.	☐	☐	☐	☐	☐	
E3. Society and character. The roles, motives, and tensions imply a believable community with more than interchangeable characters.	☐	☐	☐	☐	☐	
E4. Spatial/material specificity. Places and objects are concrete, recognizable, and tied to how the world works.	☐	☐	☐	☐	☐	
E5. Interaction possibilities. The world suggests multiple meaningful things a player could try beyond ordinary conversation.	☐	☐	☐	☐	☐	
E6. Visual coherence. The map and character asset are readable and belong to the same world described in the text.	☐	☐	☐	☐	☐	
E7. Overall judgment. Taken as a whole, this is a high-quality generated world that I would want to explore.	☐	☐	☐	☐	☐	

First action

What is the first consequential action you would try in this world?

Most distinctive element

Which generated detail most strongly gives this world its own identity?

One improvement

Which single generated element most needs improvement?
